156 The picture of life in Amatenango[67] and Aguacatenango is
62 not, however, from the ideological point of view of the community
754 members, spread only into sanctions of negative dimensions. There
777 are some justifications for wealth or success which are as intimate a part of the world view of the villagers as witchcraft is, because witchcraft has a positive counterpart: suerte (luck).

777 Suerte, as witchcraft power, is also a supernatural power given to the particular individual without the person's will having control over its possession. Some people are born with good suerte, some people with bad suerte. Some people can be "given" a particular suerte by a supernatural being[1] at some time in their life to keep until his death or for some period of time. Of course, a man cannot give his suerte away or transmit it to his children. The suerte is not a general power, but has specific dimensions. For example, a man has suerte to raise cattle, which would, then, grow and reproduce tremendously in his lifetime. But, he may very well have bad bean crops. His children, at his death,

---

[716] [1]The suerte can be given by many different supernatural beings. Some informants say it is Dios (God), or the Virgin Mary, some say it is the Sombrerón, or owner of the deer and caves, to whom one has to promise to give one's soul at death, some others indicate that it is written in one's destiny at birth to have a particular type of suerte. The variations in the belief are many, and in a system of ideology without a Church body to create, and control the diffusion of dogma, this is to be expected.

[719] The only organized dogma available to the villager is the
[538] local Catholic Church, but this dogma leaves out a series of beliefs such as suerte and brujería as unacceptable. Therefore, these beliefs are only transmitted informally, together with folk-tales, myths and the like. Because dreams are of great importance in re-
[787] lation to these beliefs, each individual can contribute, through
[791] his personal dream experiences, to the general pool of ideology of the community. Therefore, tales and myth, dream experiences, the "true" stories that people are told in the evening by particular relatives or friends, all tend to produce a mushrooming of alternative versions of the same or similar sets of beliefs.

would inherit the cattle, but there is no assurance that the animals would not rapidly die: the children may not have the father's suerte to raise cattle, but one of them may have it to grow beans.

Good suerte is a concept attached also to certain skills: if a man has that special suerte, he can have a mano fría (cold hand) which is necessary to castrate or brand animals without having their wounds get infected. In addition, a woman can become a midwife because she has the suerte to deliver babies. On the contrary, a person with bad suerte can have a mano caliente (hot hand), and be unable to carry on such tasks.[1]

Then, ideologically, people belong to two opposite categories. On the one hand, there are those with "small hearts" and witchcraft powers. On the other hand, there are good people with suerte. If a man is well thought of, the villagers say he has suerte. If they dislike him, they say he is a witch.

Every villager has to gamble carefully and weigh his odds, balancing his behavior in such a way as to avoid the "misjudgement" of his fellow villagers. The better they know and like him, the more likely it is that they would think that he has suerte. The more he creates enemies, the higher his probability of being

---

[1] There are many part-time specialists in the village who do their work for neighbors and relatives at irregular intervals, never as a life specialization, except in a few cases such as midwives. Women may castrate chickens, or be called in as cooks at fiesta time. Men may be good at branding horses, roofing, etc. None of these jobs contributes substantially to the household income, except for the roles of carpenter, midwife and curer. Curers, however, are a separate category altogether, being ritual specialists "known" to have metaphysical powers.

156 754 [609] accused of having an evil supernatural spirit. (A consequence of this is that recent immigrants to the village, not well known by the community at large, or solitary characters that keep to themselves, are more likely to be thought of as witches even if they do not break community norms.)

621 The Macro-Structure: Barrios

Amatenango and Aguacatenango are both divided into two barrios which are territorial divisions separated by an imaginary line that cuts across the villages through their central plazas. The barrios of Amatenango are called Aconantik and Anextik (Upper and Lower) while the Aguacatenango barrios have Saint's names.

[191] This dual barrio division is common to many Indian settlements in the Tzeltal-Tzotzil region of the highlands of Chiapas, as opposed to the multiple barrio system of the mixed Indian and Ladino towns.

In the community of Oxchuc, the barrios (kalpuletik) function, according to Siverts (1960), as non-exogamous moieties with important political and ritual functions. In the opinion of this author, these barrios are just pseudo-moieties (Murdock, 1949; 47) not being based on rules of descent, but cutting across the lineage, sib and phratry units to which Oxchuqueros belong (Guiteras Holmes, C. 1952; Villa Rojas, 1945). This definition as pseudo-moieties holds true for the barrios of both Amatenango and Aguacatenango. They are not directly connected with any descent groups, but are territorial units with functions similar to those of real moieties.
